

Job Description

We are looking for an Entry to Mid-Level Instrumentation Technician to join our growing US Operations. The successful candidate will be responsible for performing analytical service and repairs on water monitoring instrumentation as well as support for other team members and customers in a defined territory. A strong background and/or training in applied sciences are desired to be a successful candidate in this technician role. A “hands on” technician that is able to support the service needs of our customers is what we are looking for.

Summary

Main duties include providing support for customers, regional sales managers (RSM's) and distributors to enable them to clearly understand Swan products and the chemical, physical and microbiological characteristics of liquids and their reactions to reagents. Must be a team player, work in conjunction with Region Sales Manager's, function as a trainer, lead technical person/coordinator to meet project guidelines. Position will include calibration, maintaining, and troubleshooting of analytical instrumentation.
